PROFESSIONAL PROFILE

Hands-on Software Architect and Senior .NET Engineer with more than 12 years of professional experience. I design, modernize and implement complex systems, following decisions from discovery and problem decomposition through testing, delivery, observability and production diagnosis.

EXPERIENCE

Senior .NET Developer / Software Architect

Domingo Alonso Group · *July 2021 - Present*

Hands-on senior architecture and engineering spanning discovery and design through review, delivery, observability and production follow-through.

.NET/C# services, distributed systems, relational data, testing, Azure, observability, safe modernization and influence-based technical leadership.

Requirements pre-analysis, problem decomposition and collaborative comparison of alternatives. Architecture guidance, ADRs, mentoring and design/code review in a multidisciplinary team of around 10 people.

Azure App Service, Functions, SQL, Storage and Key Vault; pipelines with tests, Sonar and multiple environments. Blue-green deployment and controlled final promotion, followed by OpenTelemetry/Application Insights and SQL diagnosis.

Supervised agent engineering workflows and incident diagnosis through orchestration of telemetry, knowledge, code and reporting.

Senior .NET Developer / Full Stack Engineer

Anexia Tecnologías y Consultoría · *December 2017 - July 2021*

End-to-end responsibility across applications, from requirements and functional/technical analysis through architecture, backend, frontend, mobile, deployment and support.

.NET and Angular solutions, production Flutter Android/iOS applications, and real-estate predictive models using ML.NET and PostgreSQL.

.NET Developer

Vector ITC Group · *May 2017 - December 2017*

Process and reporting automation, campaign systems, and classic NLP/ML using lexical methods, Bag of Words, TF-IDF and Naive Bayes.

.NET Developer

Nokia · *January 2016 - May 2017*

Evolution of CAD tools into a GIS-like platform for telecom network modelling, validation, costing and preliminary designs.

.NET Developer

Alcatel-Lucent Enterprise · *September 2014 - January 2016*

Automation, an internal platform and CAD integrations with engineering validation rules using .NET, C#, VB and web components.

Web Developer

Freelance · *June 2013 - October 2014*

Web layout and development for clients, delivering public-facing websites.

Systems Technician Intern

La Salle · *October 2013 - February 2014*

Systems installation and maintenance, with basic Windows Server work.

Android Developer Intern

Signlab Nuevas Tecnologías · *January 2013 - April 2013*

Android applications for museum-related experiences and interactive image components.

Android Developer Intern

XUL Comunicación Social · *October 2012 - December 2012*

Early Android application development and reusable mobile components.

COMPETENCIES

Software Architecture · .NET / C# Backend · Functional / Technical Analysis · Problem Decomposition / Solution Shaping · Legacy Modernization · Testing / Quality Engineering · Technical Leadership · End-to-end Ownership · Distributed Systems · Event-driven Architecture · Performance Engineering · SQL / Data Architecture · Observability / Production Diagnostics · Azure Application Platform / CI-CD · Full Stack / Frontend · Mobile / Multiplatform · Applied AI · Agentic Engineering · Agentic Product Architecture

CONFIRMED ACHIEVEMENTS

Integration-suite feedback: The largest integration suite changed from approximately 60 minutes to approximately 2 minutes.

Domingo Alonso Group · largest integration suite; cumulative shared-infrastructure improvement.

Fewer synchronous calls per event: Summary events removed approximately 1-2 synchronous API calls per relevant event.

Affected integrations and relevant events.

Reads isolated from transactional data: The read representation reduced pressure and blocking on operational data; exact state stays at the authoritative source. Domingo Alonso Group · catalogue and filters; qualitative outcome.

Modernization with a safe fallback: Progressive accessory-pricing extraction retained legacy behaviour as a stable fallback.

Domingo Alonso Group · anonymized pricing area; qualitative outcome.

ARCHITECTURE DECISIONS

Remove an unnecessary service: Challenge the microservice and return responsibility to the boundary that could own it more simply.

DDD only where domain complexity exists: Simplify and accept controlled infrastructure coupling when it better fits the problem.

Modernization is risk management: Use Golden Master, seams, old/new coexistence, Strangler, toggles and rollback proportionally.

PERSONAL ENGINEERING LAB

Platform934 - Explore a complete media product and measure its behaviour on real TV hardware.

Flutter favoured reuse; Kotlin and Media3 require a dedicated client in exchange for control over focus, lifecycle and playback.

EDUCATION

Technical Engineering in Management Information Systems - Escuela Politécnica Superior de Córdoba. Coursework completed except the final project; degree not awarded.

LANGUAGES

Native Spanish.

English: advanced technical reading and comprehension; professional spoken conversation developing.
